- With the same active ingredient used by commercial farmers
- Negligible to no impact to beneficial insects including honey bees
- Can be used on fruits and vegetables intended for canning
- Available in SERENADE Garden Disease Control Concentrate, RTU, and RTS

How Serenade Garden Works

Novel Modes of Action

*Mildew on Untreated
Leaf Surface*

*SERENADE Destroys
Germinating Fungal Spore*

- The active ingredient, *Bacillus subtilis*, in SERENADE Garden produces by-products called lipopeptides.
- Lipopeptides punch holes in cell membranes causing contents to leak out, collapsing and destroying the fungal cell.
