Rose-tone is a complete plant food. It contains all the essential plant nutrients.

The Espoma Co. • 6 Espoma Rd. • Millville, NJ 08332

Directions

1 pound equals approx. three cupfuls

New Plantings

Bare Root Plants:

Dig a hole about 12" across and 18" deep. Add peat moss and 2 cups of Rose-tone to the soil removed and mix thoroughly. Use this mixture to partially refill hole. Make a cone of soil to place plant on. Spread roots evenly. Planting depth should be such that the graft knuckle is just below ground level.

Add 4 – 5 inches of soil and pack soil gently but firmly around roots. Fill hole to within 2 to 3 II with inches of top, fill with water and let it soak in. Finish filling hole.

Potted Plants:

Some pre-packaged roses should be planted in their original container. Follow instructions on container to determine if the plant should be removed or planted with the container.

Follow direction for "Bare Root Plants" for general planting procedures and hole size. Instead of making a cone to place roots on, fill the hole with enough soil so that when container is placed in it, its soil level, is equal to the ground level is the same of the surrounding area. Place plant in hole and refill as outlined above.

Established Plants

Feed monthly from beginning of season to middle of September. Sprinkle 3 cups of Rose-tone around plant drip line like adding salt and pepper to food.

Individual Plants:

Apply approximately 3/4 cup of Rose-tone around each plant and scratch into the top inch of soil. Sprinkle Rose-tone around like adding salt and pepper to food. Add 1 cup thoroughly to each plant from beginning of season to middle of September (or 1 cup per 10 sq. ft. of area).

Rose Beds:

Spread 4 lbs. of Rose-tone per 100 square feet of bed area and scratch into the top inch of soil.
